

Infection Control Products for Small Practices/Medical Offices

Surface disinfection is critically important during an outbreak. Protect your staff and patients with hygienic keyboards and mice that can be easily cleaned and disinfected at point-of-care. Clean high-touch surfaces between each treatment.

Medical Grade™ keyboards & mice are IP68 and can be immersed completely in a disinfectant. Washable keyboards & mice can be sink rinsed, sprayed and wiped with standard hard surface cleaners and disinfectants. Silicone drapes and mouse pads can be sterilized.
