MAN & MACHINE Infection prevention keyboards and mice

Infection Prevention during COVID-19 outbreak

SurfaceDisinfectionisspecificallyimportant duringanoutbreak, such as the COVID-19. Hygienic keyboards and mice can help protect patients and staff.

Our product surfaces can be disinfected and our keyboard drapes can be sterilized to eliminate the spread of viruses. We recommend disinfecting high touch surface areas like keyboards and mice between treatments.

You can use most standard surface disinfectants, such as those on an alcohol or chlorine basis. You can always verify in our cleaning instructions if it is safe to use the disinfectant of your choice, or contact the manufacturer
