

MAN & MACHINE presents

Private Eye™

The Out-of-the-Box
Privacy Solution to
Safeguard On-Screen Info

Client data is stored on secure servers, files are password protected, but is confidential information protected on the computer monitor? Whenever critical or confidential information is displayed, it should be protected from prying eyes. The need for visual privacy has increased as more data is digitized, with a growing need for physical safeguards to keep this data secure.

A significant number of end-users remove filters from their monitors out of annoyance, thus placing their organization at risk of wrongful negligence. Reduce your risk and introduce your computer users to the Private Eye™ Monitor from Man & Machine, a permanent, tamper-proof privacy filter installed under the monitor's bezel. Equip your computer users with a solution that's more permanent than a sticky note!

Man & Machine, a USA manufacturer, has over 35 years experience in building and modifying computer monitors. For Private Eye™, Man & Machine has teamed up with Dell, HP, Planar and Samsung to offer this tamper-resistant privacy enhancement, without voiding the monitor warranty. With our expertise in customization, we can bring you the benefit of Private Eye™, by retrofitting your existing monitor to include the privacy filter.¹

Monitors:

Features

The Man & Machine Private Eye™ Monitor is a high quality LCD monitor with a built-in privacy filter, which obscures critically important data from any angle except direct line-of-sight by the computer operator

- Integrated Privacy Filter providing a tamper-proof privacy solution
 - Provide visual security on monitors
 - Block unauthorized viewers from seeing information from side views
 - Anti-reflective coating reduces glare for more effective viewing
- Additional layer of monitor screen protection

Specifications

- Built-in Privacy Filter
- Vertical Viewing Angle: 30° L,R
- Supports compliance with Federal Privacy Legislations, including:
 - HEALTHCARE:** Protects electronic Protected Health Information (ePHI). Comply with HIPAA, HITECH, Omnibus Rule, and JCHAO regulations.
 - GOVERNMENT:** Sensitive data is viewed on a monitor every day. Classified data stays classified when displaying essential "need to know" information on a solution that complies with FISMA and PCI DSS regulations
 - FINANCIAL/BANKING:** Protect customers Personally Identifiable Information (PII) from prying eyes with a solution that complies with GLBA and PCI DSS regulations
 - EDUCATION/LIBRARIES:** Deter test cheating by limiting the view to the user's eyes only, and ensure that users viewing inappropriate content cannot effect passers-by with a solution that complies with CIPA legislation

¹ May impact existing monitor warranty.
