Wireless Keyboard and Mouse Pairing Guide

Connect a compatible MMI wireless keyboard and mouse to one USB receiver.

Before you begin

- Charge both devices and place them within 12 inches of the receiver.
- Set both devices to RF mode. Disconnect other MMI wireless receivers during pairing.
- Use the receiver that will remain connected to the computer.

PAIR THE KEYBOARD TO THE MOUSE RECEIVER

1 Start pairing mode
Press and hold Esc + M for 3 seconds. The keyboard's green indicator should flash rapidly.

2 Reconnect the receiver
Keep the keyboard close to the mouse receiver. If pairing does not begin, unplug and reinsert the receiver.

3 Wait for connection
Allow up to 20 seconds. Pairing is complete when the indicator stops flashing and the keyboard responds.

PAIR THE MOUSE TO THE KEYBOARD RECEIVER

1 Start pairing mode
Press the left button, right button, and center scroll wheel at the same time. The mouse's green indicator should flash rapidly.

2 Reconnect the receiver
Keep the mouse close to the keyboard receiver. If pairing does not begin, unplug and reinsert the receiver.

3 Wait for connection
Allow about 20 seconds. Pairing is complete when the indicator stops flashing and the pointer moves.

If pairing does not complete

- Confirm both devices are charged and in RF mode, then repeat the pairing sequence.
- Move the devices closer to the receiver and try a different USB port.
- Remove nearby wireless receivers or USB 3.0 devices that may cause interference.
